Annual Student Health Screenings

Each year, students are screened by a nurse in the health office. This typically takes place in the fall. New students will receive screening within one month of their start date. The health office will assess the following factors as students are able and willing to tolerate:

Height and weight
Vision
Scoliosis (specific grades based on gender)
Colorblindness (required once)

The speech therapy department is responsible for completing audiological screenings.

Results of the screening are kept in the student's health record and results will be sent home. If any concerns were noted during the screening, families will be notified.
